-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

3. Claims 1, 2, 6 and 8 are rejected under 35 U.S.C. 102(a) as being anticipated by Applicant's admitted prior art.

Applicant's admitted prior art Fig. 11 discloses a power supply device with a charging section and operation control section. A charging section (3-6) which is actuated to charge a charging element (6), a direct-current voltage generation section (8-13) which generates a second direct-current voltage based on a first direct-current voltage of the charging element (6) and applies the generated second direct-current voltage to a load (L) and an operation control section (14 and 15) which actuates the charging section (3-6), determines whether a state of the load (L) to which the direct-current voltage generation section (8-13) applies the second direct-current voltage is a lightly loaded state or not and in case where determining that the load (L) enters a lightly loaded state, controls the charging section (3-6) to stop operation of charging the

charging element (6) when a preset time period elapses after it determines that the load (L) enters the lightly loaded state.

Allowable Subject Matter

4. Claims 3-5 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter: A power supply device with an output timing section which, when the load state detection section outputs a determination signal representing that the load enters a lightly loaded state, sets a timing counted from when the determination signal is output and outputs the timing and an operation stopping section which controls the charging section to stop the operation of charging the charging element when the output timing setting section outputs a determination signal representing that the load enters a lightly loaded state.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
